

B) High School Team Stats:

High School coaches are usually required to keep stats: 1) To use as feedback for the players, 2) To use for Newspaper articles / scores, etc. and 3) Documentation for the school (to name a few). Coaches need stats to assist with player / team development. Use stats to help pinpoint areas that your team needs to improve on, and to "praise" your team's strong points as well. Stats do not "lie" and are usually not contested by players (although excuses will arise from time to time). If a team loses a close one (by 4-6 points for example) and the free throw percentage was 8 for 23 (35%) for the game – you may want to work on free throws (go figure). I have found that High School players appreciate hearing about stats – both the good and bad.

Individual Stats are kept within this same Excel file (Excel file - Players names are at the bottom of the page). The file is linked between the different sheets (players and team page) - so when you enter information on an individual sheet it automatically shows up on the team stat sheet.

C) Individual High School Player Stats:

How important are they?

One main reason to use stats is to update individual players on their game performance, but another very important reason is for College Recruiting purposes. College coaches want to know the stats of players they are recruiting. One of the first things a college coach will ask for are a players individual stats. How important are high school player's stats? Stats could be the difference on getting a college scholarship or not?

Note on AAU Stats: These days many college coaches are also looking at a high school players AAU stats (as well as the players High School stats). College coaches like to know that players they are recruiting are playing all year round.

Last Word on Stats: Stats are used as an important tool in developing and preparing players to do their best in the games, but should be communicated in a positive manner (without blaming individual players). Using stats to motivate players to work harder can only have a positive affect on the team as a whole. Good luck!
